Please find below and/or attached an Office communication concerning this application or proceeding.

Application No. Applicant(s) 1/V BROWN ET AL.				A				
Examin r			Application No.	Applicant(s)				
Thanh T. Nguyen The MalLING DATE of this communication appears on the cover sheet with the correspond nc address— Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. The MalLING DATE OF THIS COMMUNICATION. If the period for reply specified above is less than thirty cold days, a reply within the statitory minimum of thirty (30 days will be considered timely. If the period for reply specified above, the machine antimotry period will apply and will expire St. (6) MONTH's from the menting date of the communication. If the period for reply specified above, the machine after the malling date of the communication, in the malling date of the communication. If the period for reply specified above, the machine after the malling date of the communication, even if timely filed, may reduce any seamed patent torm adjustment. See 3 T CFR 1.740g. Status Status Status Status Status Status Signed this application is in condition for allowance except for formal matters, prosecution as to the mentis is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1:20 is/are pending in the application. 4a) Of the above claim(s) 11:20 is/are withdrawn from consideration. 5) Claim(s) is/are objected to. 3) Claim(s) is/are objected to by the Examiner. Application Papers 9) The specification is objected to by the Examiner. If approved, corrected drawings correction filed on is: a) □ approved by the Examiner. If approved, corrected drawings are required in reply to this Office action. 10) □ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a) or (f). a) □ All b) □ Some * c) □ None of: 1. □ Certified copies of the priority documents have been received in this N	•	Office Action Summany	10/064,301	BROWN ET AL.				
The MALING DATE of this communication appears on the cover sheet with the correspond nc address—Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE ② MONTH(S) FROM THE MALING DATE OF THIS COMMUNICATION. Exercised time may be switched used the provisions of 3 CFR 1.136(o). In ne event, however, may a reply be timely filed If the period for may's specified above is line to the third of 100 (bits, a reply vibilen he stationy rintimum of thirty (30) days, will be considered timely. If the period for reply is specified above, the maximum called year poly will be period for reply is specified above, the maximum called year poly will be considered timely. If the period for reply is specified above, the maximum called year poly will be period for reply within the station of the period of the communication. Final period for reply is specified above, the maximum date of the communication of the period of the	·		Examin r	Art Unit				
Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. after 30x (6) MONTHS from the mailing date of this communication. If the period for reply septimed above, the maintinum statistics yeards within the statisty minimum of thirty (30) days will be considered timely. If NO period for reply septimed above, the maintinum statistics yeards within the statisty minimum of thirty (30) days, are play within the statisty minimum of thirty (30) days will be considered timely. If NO period for reply septimed above, the maintinum statistics yeards with gapts and vall expires \$10x (6) MONTHS from the maining date of this communication. If NO period for reply septimed the one should be supply and vall expires \$10x (6) MONTHS from the maining date of this communication. If NO period for reply septimed the one should be supply and vall expires \$10x (6) MONTHS from the maining date of this communication. Any poly received by the Office the three months and the supply and vall expires \$10x (6) MONTHS from the maining date of this communication. Any poly received by the Office dust then there months after the mailing date of this communication. Any poly received by the Office dust then the from months and the supply and the supplies of the communication. Any poly care the supplication is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Exparte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claim(s) Lipida and accordance with the practice under Exparte Quayle, 1935 C.D. 11, 453 O.G. 213. DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 1-10 in Paper No. 4 is acknowledged.

Claims 11-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected without traverse, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 4.

Oath/Declaration

Oath/Declaration filed on July 1, 2002 has been considered.

Information Disclosure Statement

The information disclosure statement (IDS) filed on 7/1/02 has been considered by the examiner.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: --Structure for scalable, low-cost polysilicon capacitor in planar DRAM--.

٠ ند

Claim Objections

Claim 1 is objected to because of the following informalities:

In claim 1, line 1 "a substrate" and in claim 1, line 4 "a semiconductor substrate" lack clarity in providing one substrate for a structure which applicant regards as the invention.

Changing "a substrate" in claim 1, line 1 to "a semiconductor substrate", and changing "a semiconductor substrate" in claim 1, line 4 to "the semiconductor substrate" or "the substrate" is suggested.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Cunningham (U.S. Patent No. 6,177,697).

Referring to figures 1-3B, Cunningham teaches a structure formed on a substrate comprising:

a plurality of isolation filled trenches (10) in the substrate (28/6, see figure 1 and col. 4, lines 39-61),

Application/Control Number: 10/064,301

Art Unit: 2813

a plurality of holes (18, called "trench" in Cunningham) in the substrate (28/6), each having a plurality of sidewalls and a bottom wall (see figures 1, 2, and col. 4, lines 62-65), located in a region of a semiconductor substrate in which the plurality of isolation filled trenches (10) are absent, holes (18) having a depth proximate that of plurality of isolation filled trenches (10, see figure 1 and col. 6, lines 50-54),

insulating material (16, see col. 4, lines 40-41) present in each of the plurality of holes (18) on the plurality of sidewalls and bottom wall; and

a conductor (22/23, see col. 6, lines 4-5) overfilling each of holes (18) and extending onto an adjacent upper surface of the substrate (28/6, see figure 1),

regarding to claim 2, a counter-doped region (6a, see figure 1 and col. 5, lines 58-63, and col. 6, lines 14-22, since region 6a having p-type dopant which is opposite to the n-type well region 28, hence region 6a is a counter-doped region) present in pillar regions of the semiconductor substrate (28/6) that surround the holes (18),

regarding to claim 3, a well region (28) located in semiconductor substrate (28/6), regarding to claims 4 and 5, a transfer device (19, a field effect transistor, i.e. a gate electrode 19 formed on a gate oxide layer 16 having LDD source/drain regions p+, see col. 6, lines 3-13) located atop a surface of the semiconductor substrate (28/6) adjoining the plurality of holes (18),

regarding to claim 7, insulating material (16) is disposed on the upper surface of the substrate (28/6) beneath portions of conductor (22/23).

Application/Control Number: 10/064,301

Art Unit: 2813

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cunningham (U.S. Patent No. 6,177,697) as applied to claims 1-5 and 7 above, further in view of Satoh (U.S. Patent No. 5,183,774).

Cunningham teaches an isolation trench (10) and holes (18) for capacitor in figure 1. However, Cunningham does not teach the insulating material is thicker on the bottom wall of the plurality of holes than on the plurality of sidewall of the plurality of holes, and an isolation dopant region is disposed below the bottom walls of the plurality of holes (as claimed in claims 6 and 9). Nevertheless, the insulating material is thicker on the bottom wall of the plurality of holes than on the plurality of sidewalls of the plurality of holes, and an isolation dopant region is disposed below the bottom walls of the plurality of holes is known in semiconductor art as evidenced by Satoh. Satoh teaches an insulating material (37, see figures 3D-3E and col. 5, lines 1-3) is thicker on the bottom wall of the plurality of holes (33, called "trench" for a capacitor in Satoh) than on the plurality of sidewalls (23) of the plurality of holes (33), and an isolation dopant region (36, called an "impurity layer" in Satoh) is disposed below the bottom walls of the plurality of holes (33, figures 3D-3E and col. 4, lines 65-68). Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention was made would have

Application/Control Number: 10/064,301

Art Unit: 2813

an insulating material thicker on the bottom wall of the plurality of holes than on the plurality of sidewalls of the plurality of holes, and an isolation dopant region is disposed below the bottom walls of the plurality of holes in the device of Cunningham as taught by Satoh *because* a thicker insulating material formed on the bottom of capacitor holes (trenches) and an isolation dopant region formed below the bottom wall of capacitor holes (trenches) would provide an isolating region to prevent the charges which are stored in the capacitor from leaking into substrate.

Claims 8 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cunningham (U.S. Patent No. 6,177,697) as applied to claims 1-5 and 7 above, further in view of Tang (U.S. Patent No. 6,437,369).

Cunningham teaches an isolation trench (10) and holes (18) for capacitor in figure 1. However, Cunningham does not teach the holes have a depth greater than the plurality of isolation-filled trenches, the substrate has a buried insulation region and the plurality of holes extend into the buried insulation region (as claimed in claims 8 and 10). Nevertheless holes having a depth greater than the plurality of isolation-filled trenches, the substrate has a buried insulation region and the plurality of holes extend into the buried insulation region is known in semiconductor art as evidenced by Tang. Tang teaches holes (30, called "capacitor openings" in Tang, see figures 7-8 and col. 4, lines 5-23) have a depth greater than the plurality of isolation-filled trenches (24, see figures 2 and 7, and col. 3, lines 60-65, capacitor openings 30 are provided through SOI layer 16 into capacitor cell plate substrate 12 while isolation trench 24 is stop at insulating layer 14) and the substrate has a buried insulation region (14, beneath the semiconductive layer 16) and the plurality of holes (30) extend into the buried insulation region (14, see figure 7). Therefore, it would have been obvious to a person of ordinary skill in the art

Art Unit: 2813

at the time of the invention was made would have capacitor holes having a depth greater than the plurality of isolation-filled trenches, and the substrate has a buried insulation region and the plurality of holes extend into the buried insulation region in the device of Cunningham as taught by Tang *because* a deeper capacitor hole would provide more capacitor area for storing charges, and buried insulating layer would provide more isolation for capacitor cell to prevent storage charges from leaking into substrate when capacitor hole extended into the buried insulating.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh Nguyen whose telephone number is (703) 308-9439, or by Email via address Thanh Nguyen@uspto.gov. The examiner can normally be reached on Monday-Thursday from 6:30AM to 4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl Whitehead, can be reached on (703) 308-4940. The fax phone number for this Group is (703) 308-7722.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0956 (See MPEP 203.08).
